PROFILE

Computer Science graduate with hands-on experience in Generative AI, LLMs, RAG systems, NLP, and backend development. Built AI-powered applications using Python, LangChain, FastAPI, Hugging Face, and vector databases. Experienced in developing document intelligence systems, AI chatbots, and retrieval-based applications. Seeking opportunities as an AI Engineer, Generative AI Engineer, or Backend AI Developer.

TECHNICAL SKILLS

- AI/Generative AI**
 - Generative AI,DL,NLP
 - RAG,LangChain, Hugging Face
- Databases**
 - MongoDB, MySQL, ChromaDB
- Frontend & UI**
 - Streamlit
- Languages**
 - Python, C++,SQL
- Tools**
 - Git, GitHub, VS Code, Postman
- Backend Development**
 - FastAPI, REST API

EDUCATION

Indore Institute of Science and Technology, Indore 2022 – 2026
Bachelor of Technology in Computer Science Engineering

INTERNSHIP

- Generative AI Intern** 07/2025 – 10/2025 | Indore, India
Mindpath Tech Private Limited
- Developed a document-based query system using LangChain, OpenAI models (text-embedding-3-small, gpt-4.1-mini),FastAPI and MongoDB to retrieve and display relevant responsesfrom client documents
 - Built a simple web interface (HTML, CSS, authentication) for users to input queries and view responses withmaintained session history
 - Implemented RAG-style retrieval by generating embeddings, fetching top relevant document chunks, and passing themto the model for response generation
 - Optimized prompt structure and retrieval logic to improve response relevance and consistency

PROJECTS

- Multi-Modal RAG Document Assistant**
 - Built a Retrieval-Augmented Generation (RAG) pipeline from scratch — extracted multi-modal content from PDFs using Unstructured and PyMuPDF, and generated chunk embeddings using Sentence-Transformers stored in a CSV flat-file vector store
 - Implemented semantic search using scikit-learn's cosine similarity over stored embeddings to retrieve top-5 relevant chunks, then passed context to tranformer for answer generationTech: Python, Streamlit, Hugging Face, PyMuPDF, scikit-learn, Pandas
- AI Resume Analyzer & Interview Prep Assistant**
 - Developed a system to analyze resumes and match them with job roles using NLP and retrieval-based techniques
 - Generated role-specific interview questions and enabled resume-based Q&A using context-aware retrieval
 - Implemented similarity scoring to evaluate skill alignment and suggest improvements for better ATS performanceTech: Python, Streamlit, LangChain, Transformers, ChromaDB

CERTIFICATES

- Python Essentials 1
- Data structures and algorithms
